PROFILE

Full Stack Developer (Java/Spring Boot, React/Next.js), freelance since 2021, delivering B2B and B2C projects from requirements to production, and core member of PWADCteam, which builds ERP, POS and restaurant management systems for businesses. My PMI Business Analysis certification shapes how I turn business needs into functional specifications, as I did during my internship at the Palais de Justice of Khouribga on a judicial case-management platform. My flagship project, JAMS, deepened my expertise in hybrid search (Meilisearch/pgvector), OCR and document-process automation.

TECHNICAL SKILLS

Backend: Java (Spring Boot), Node.js, PHP (Laravel), n-tier architecture, design patterns
Frontend: React, Next.js, TypeScript, state management, client-side optimization
APIs & Data: REST, GraphQL, PostgreSQL, MySQL, Oracle, Meilisearch, pgvector, relational modeling, data security
DevOps & Tools: Docker, Kubernetes, Git, CI/CD, Nginx, n8n (automation), Agile/Scrum methodology
Management & Analysis: Business Analysis, project management (PMI/NASBA), functional specification writing

PROFESSIONAL EXPERIENCE

Full Stack Developer — Key Technical Contributor (Internship) **July – October 2025**
Palais de Justice de Khouribga — Public Sector / Justice | *Khouribga, Morocco*

- Key technical contributor to the digitization of judicial procedures, working with the project lead to translate legal requirements into functional specifications.
- Designed and developed the backend (Java/PHP, SQL) of the case-management platform, with access controls for sensitive data.
- Result: estimated 30% reduction in administrative case-processing time.

Back-End Developer & API Specialist (Final-Year Internship) **April – June 2025**
Brink's Morocco — Logistics & Security | *Casablanca, Morocco*

- Designed and developed REST and GraphQL APIs with Spring Boot to interconnect multiple heterogeneous internal services.
- Built React.js interfaces connected in real time to APIs for logistics operations tracking.
- Analyzed and refactored SQL queries to reduce processing latency and optimize server performance.

IT Support & Automation Associate (Introductory Internship) **August 2024**
OCP Group — Khouribga | *Khouribga, Morocco*

- Maintained operational readiness of the IT estate in a high-availability industrial environment.
- Developed automation scripts (Python/Bash) to generate maintenance reports.

FREELANCE EXPERIENCE / INDEPENDENT PROJECTS

Freelance Full Stack Developer **2021 – Present**
Independent engagements for B2B and B2C clients

- Designed and developed complete web and mobile applications (Java/Spring Boot, Node.js, React, Next.js) for direct clients, from requirements to production.
- **Flagship project:** JAMS (Judicial Archive Management System) — a physical and digital archive management system compliant with the Ministry of Justice archiving charter, featuring hybrid search (Meilisearch/pgvector), OCR and a document-processing pipeline.
- Core member of PWADCteam — a team building ERP, POS and restaurant/B2B systems, offered as ready-made products or custom engagements through its marketplace (pwadcteam.com).
- Built business automation workflows with n8n for clients (tool integrations, data processing).
- Managed client relationships independently, from needs estimation to delivery and post-launch support.

EDUCATION

University Diploma of Technology (DUT) — Computer Engineering **2023 – 2025**
École Supérieure de Technologie de Béni Mellal | *Béni Mellal, Morocco*

- Intensive technical program covering software engineering, system administration and n-tier architectures (Java EE).
- Hands-on projects in modern web development and database administration (Oracle/MySQL/PL-SQL).
